

LUMIERIX Project Management 1.0

This manual will help you sell & deliver projection-mapping projects

Thank you

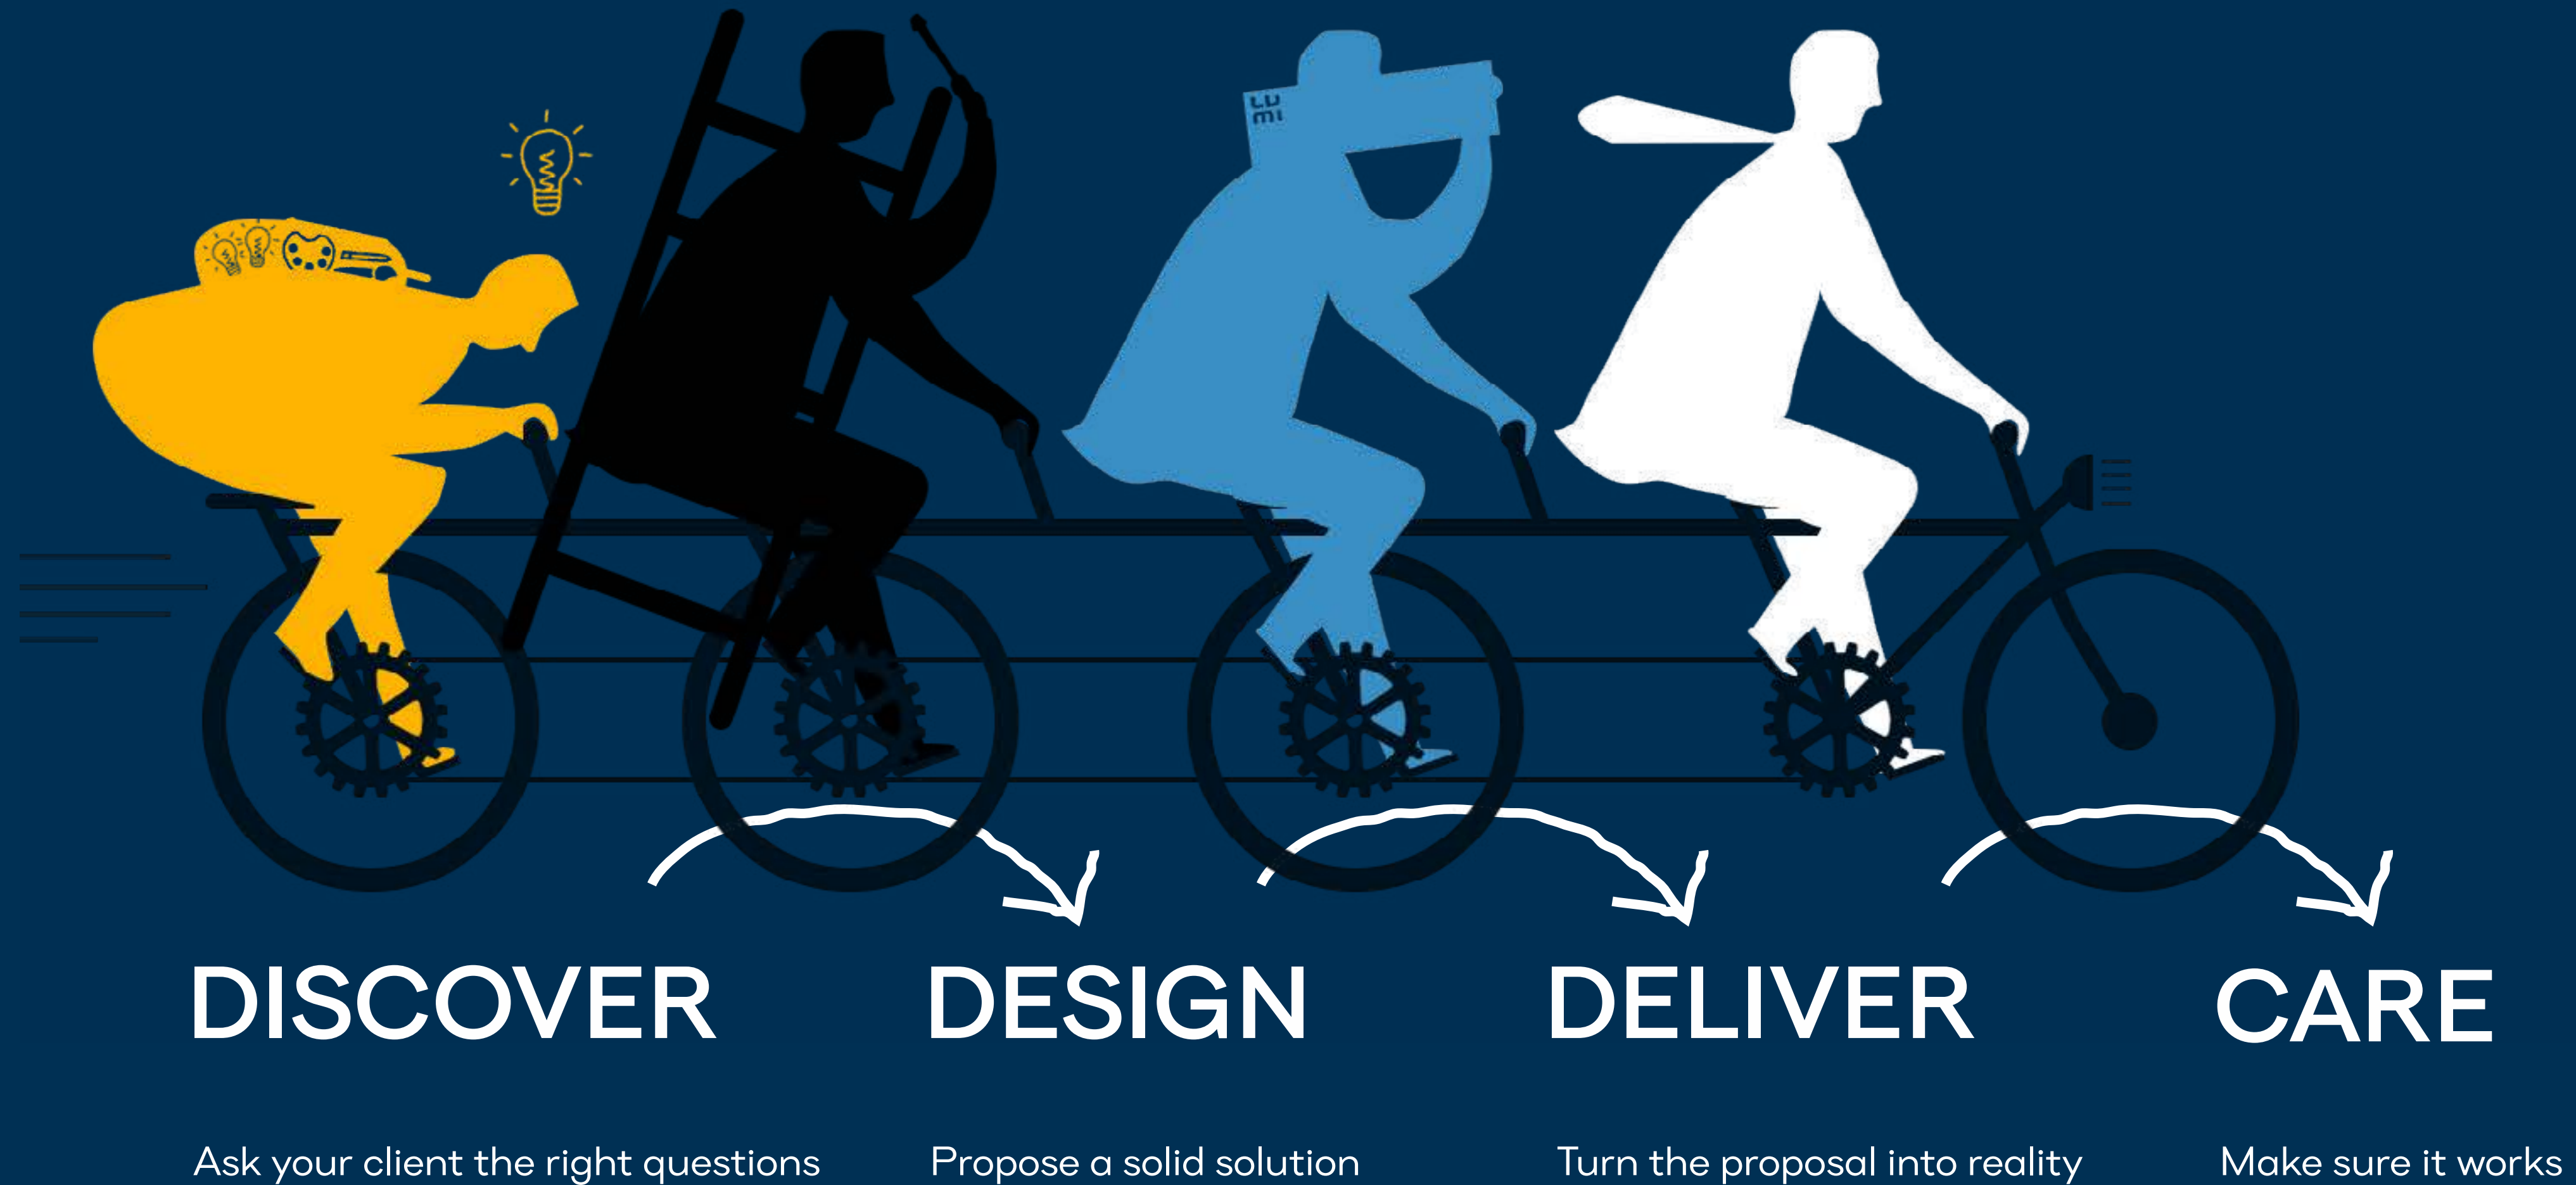

for choosing Lumitrix technology to stand behind you.

This document is a complete process management tool in the field of projection-mapping. It addresses all key factors of a successful project and reveals its dependencies in relation to the project time-line. With Lumitrix personal support, you will get through all steps easily and your customer will get amazing, functional and reliable audio-visual experience as a result.

Lumitrix customer support

cs@lumitrix.net

We want to make sure your experience with Lumitrix products and its integration will be effective and streamlined. Therefore, we offer following services to help you handle all stages of the project, from first design sketch to the complete project delivery.

← EXPERT ADVISE

Send us information and data and we will offer a timeslot for a video - call to discuss your project with Lumitrix professionals.

Free of charge

← SIMULATION

2 weeks

Project Simulation is a design consultancy service resulting in the Simulation Document. It contains a 3D model of the Illuminated Object with Lumitrix projectors. The Project Simulation tool helps estimate projection screen properties, such as The Illuminance and helps calculate hardware costs.

Project Simulation cost € 500 - € 2000, depending on project complexity

← CALIBRATION ASSIST

1 day

In case your project contains more than one projector (2+) and in case you want to merge this group of projectors into a single seamless screen, the Image Calibration needs to be performed. This process contains a few calibration sub-steps (scanning, edge-blending, grid aligning and device grouping). The Image Calibration process has to be performed in darkness and once the projectors are installed in their final position. Lumitrix Customer Service (video-call) will help your Installation Service Team complete the Image Calibration.

1 hour Calibration Assist is included with each Lumitrix projector free of charge, else, Calibration Assist cost € 50 per hour

← UPLOAD ASSIST

1 day

Once Creators are done producing the Media Content (final video), they need to upload the results into Lumitrix projectors. They may not be familiar with the Lumiverse User Interface and may not know how to upload the files correctly. In such case your Content Creators may drop the finalized media to a Google Drive folder (or similar), and Lumitrix Customer Support will take care of its correct transfer to Lumiverse.

Upload Assistance cost € 50 per hour

← END - USER ACCOUNTS

1 day

In some cases, you may need to hand over the rights to control and manage the projection system to your end-customer. For example, in a restaurant waiters may need to access the controller. For that purpose, new Lumiverse account with desired user rights will be created.

End-User Accounts cost € 25 per account (first 2 accounts per device free of charge)

← SUPPORT & SLA

Lumitrix offers superior quality, however, even the best products may malfunction in some cases. When things break down and don't work the way they should, Lumitrix Customer Support is at your service and will fix the system for you remotely. In case remote fix is not possible (extremely rare) you may need to send your Lumitrix devices to the closest service point.

The technical support is available free of charge as long as the Lumiverse licence fees (SLA) are paid-up.

INSTALLATION SERVICE

Perfection is hidden in details. We recommend Lumitrix Certified Installers (3rd party service), whose task is to manage the technical aspects of projection-mapping deployment.

← INSTALLATION PLANNING

The installation team needs to prepare for on-site deploy work. Electricity, Internet, Attachment Points, Cableworks - The Site Plan provides answers to all technical questions and enables smooth cooperation between Installation Service and other professionals involved, such as electricians, architects, heavy lift service etc.

CREATORS

Who brings your projection-mapping tech to life? Creative minds. Visual gurus. A good creator of projection-mapping content is a skilled video-artist, motion designer and a visual storyteller. Creators compose the content in video editing software such as Adobe CS After Effects. Creators use 3D rendering software such as Cinema 4D for creating immersive 3D mapping effects.

CONCEPT

2 weeks

You may hire creators to develop visual concepts for your projects. A few-pager.pdf including graphic ideas and visual sketches may help you convince the customer to buy the project.

Within the concept phase, we recommend negotiation a total price for the Creators complete project work and including this price into the final price offer for your customer.

Price Offer

← CONTENT PLANNING

Once the Concept is approved and the Project Contract is signed, the scope, budget and time-line is clear.

Creator allocates team members and plan the production. In the content planning phase, the Concept Idea is transformed into a storyboard and into a detailed time plan. Creator's team is organized and ready to start the production work. You may discuss the storyboard with your customer to get feedback & approval.

ADJUST

3 days

Mapping content production is a complex work and creators are only humans. An an unseen error might easily slip through the process and make it to the final content file. This error may pop-up when you see the final content on-site in full size. The Adjust Process is here to fix this error, which means rendering and uploading the adjusted content with error removed.

SITE PLAN

[Go to parent process](#)

The Site Plan provides answers to all technical questions and enables smooth cooperation between Installation Service and other professionals involved, such as electricians, architects, heavy lift service etc.

PROJECTORS IN FINAL POSITION

[Go to parent process](#)

Projected image is positioned correctly on the Illuminated Object. Projectors are firmly secured in their final positions.

CALIBRATED IMAGE

[Go to parent process](#)

The Result of The Image Calibration process is a seamless image. The image is precisely mapped on the Illuminated Object. Lumitrix Customer Support may help your Installers complete the Image Calibration. Pixel Map (also known as project scan or animation mask) is created and hand over to Creator.

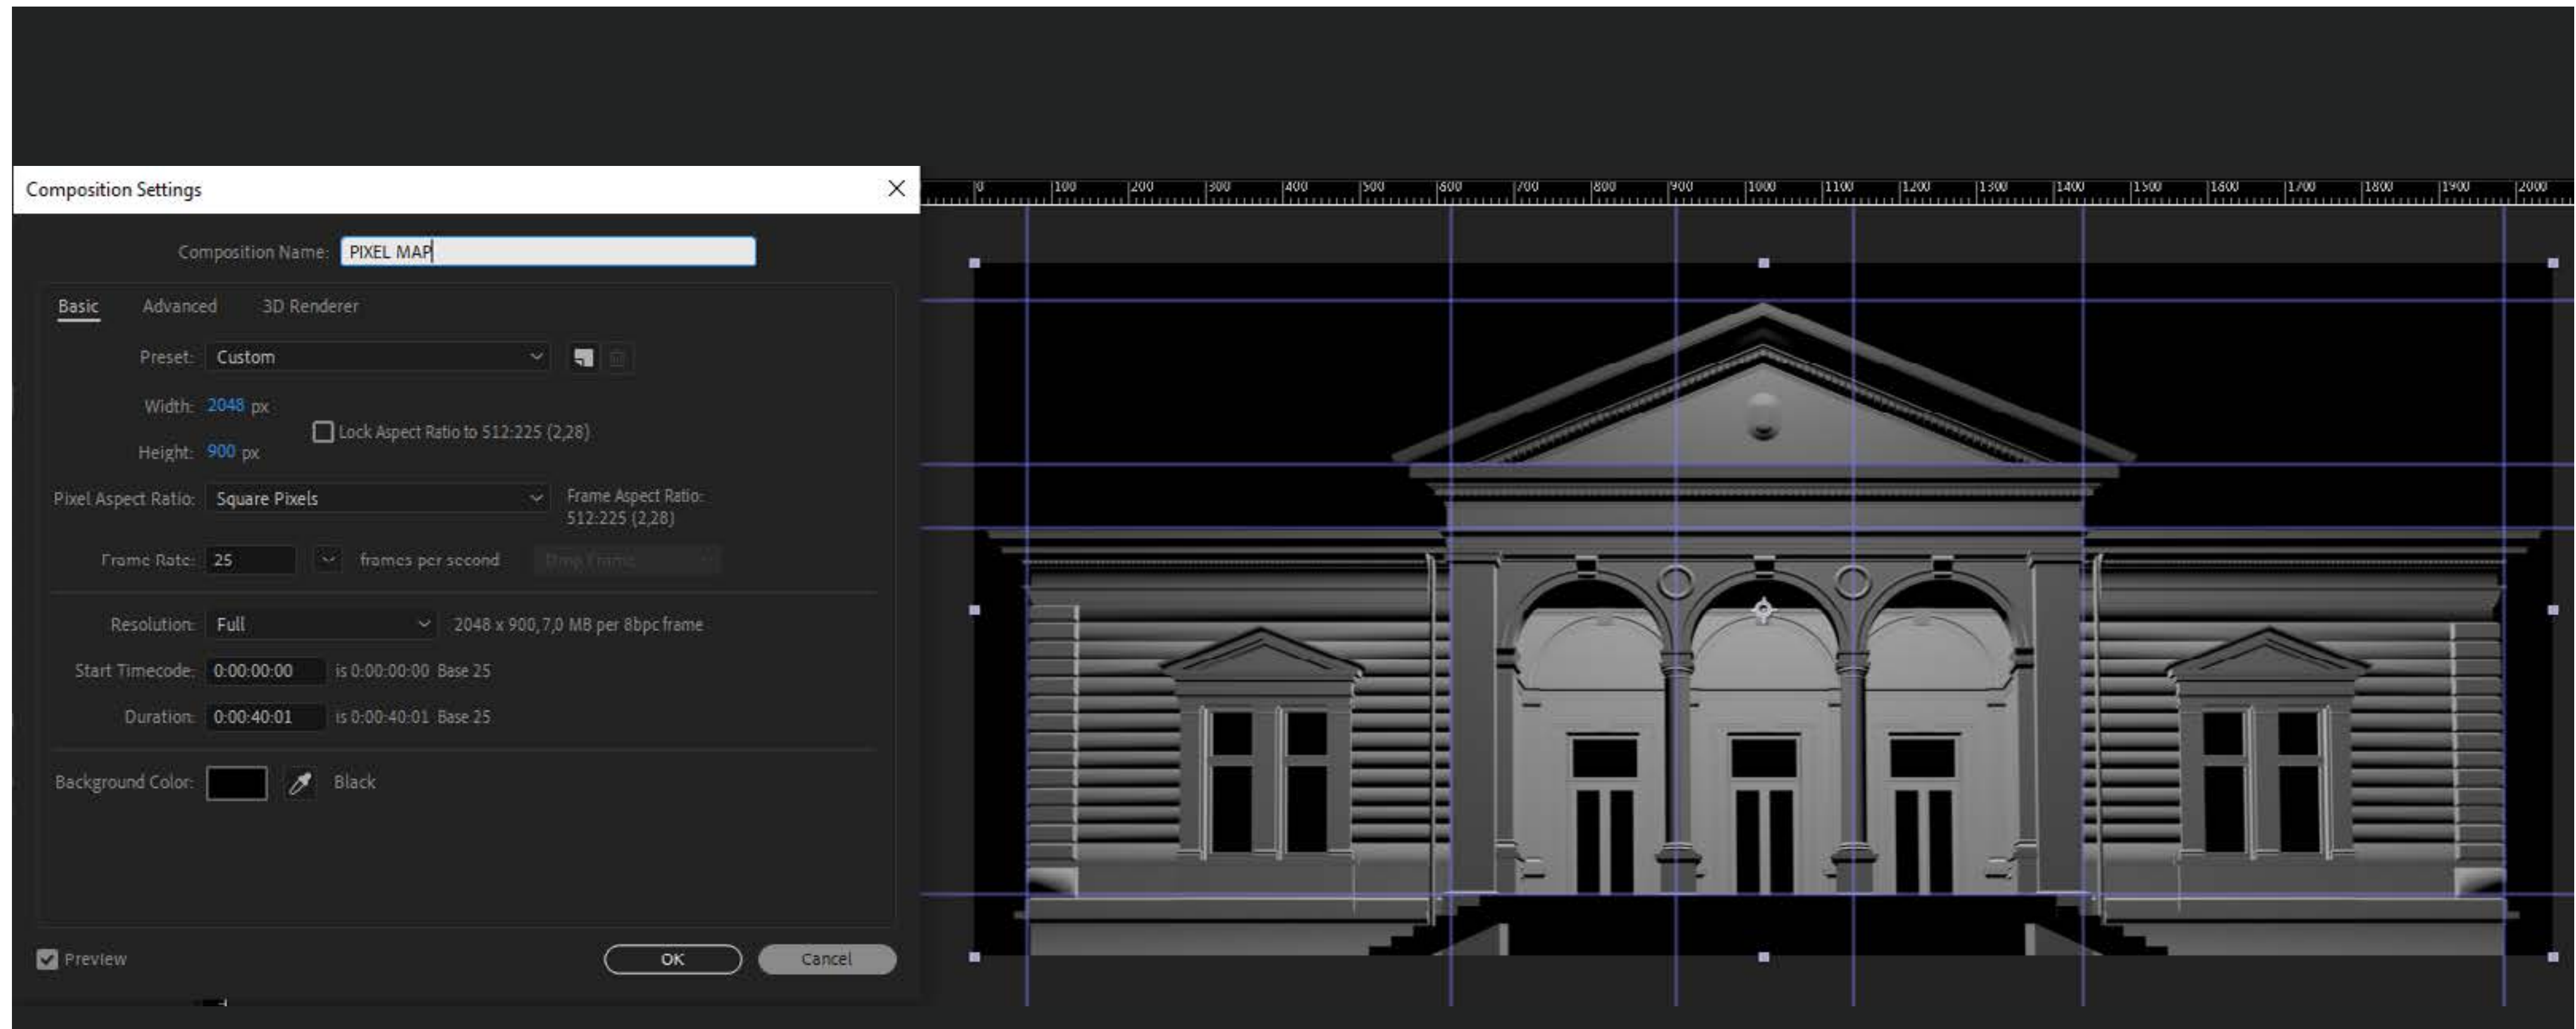

PIXEL MAP

[Go to parent process](#)

In case you hire a Creative Service to produce projection-mapping content for your projection screen, they will need the Pixel Map (also known as project scan or animation mask) to start the process. Imagine Pixel Map as a special image of the illuminated object, which is used as a template / background for the content creation.

*Pixel map is not needed in projects, where simple „light design - like“ content made out of video-loops is designed via Lumiverse app on-site

← UPLOAD TO LUMIVERSE

Go to parent process

Lumiverse is a web-based interface for managing content in Lumitrix projectors. The final content needs to be uploaded into Lumitrix projectors via this interface. Learn more about the Lumiverse interface [here](#).

END - USER DETAILS

[Go to parent process](#)

In some cases, you may need to hand over the rights to control and manage the projection system to your end-customer. For example, in a restaurant waiters may need to access the controller. For that purpose, new Lumiverse account with desired user rights will be created. The end-user account may be created with 2 different levels of rights. The account with full access enables user to access all functions of the system. The restricted account enables user to use the system and will not allow the user to access areas, where they can do unintended damage to system configuration. We recommend providing full access only to well trained experts. The restricted access is a better choice for the restaurant waiter.
